Project Preference #1:

Medical Clinic (#11)
- Sign-in screen would be useful to eliminate the need to talk to the receptionist
- Prints a number/estimated wait time for patients to see the doctor
- This would reduce line-ups and crowds inside the clinic
- Increases privacy because you don't need to read out info out loud to the receptionist

Project Preference #2:

Bus Ticketing Kiosk (#3)
- We are all familiar with the bus ticketing system and hate waiting in lines
- We are aware of the ui problems (not easy to navigate)
- Unable to see routes on the Calgary Transit system, need a phone or a map to navigate properly, this creates confusion for users and causes long line ups.

Project Preference #3:

Real Estate Website (#16)
- Allows people to browse casually without a realtor
- Would be able to see important details about the properties
- View properties on a map
- Filter properties by bedrooms, baths, garage, location etc.

*Note:* Full project descriptions can be found on D2L under the Assignments folder.
